

Lenovo Y series Laptop not powering up

Posted by lenovoadmin - 06 Jan 2017 06:49

Removed Battery and switched on AC power - still lifeless!

Replaced battery, disconnected AC chord, pressed POWER button for >45secs, put back AC connection, tried powering up - still lifeless!

Removed battery, removed AC line, pressed POWER for >45 secs, connected AC chord back only(not battery), repeated procedure 3 times - still lifeless!

Put the battery again and switched on the main power! the orange indicator for AC power turned on.

I pressed the POWER and it booted right up - However, the battery was completely out of order.

But I could at least work off AC power!
